

BloomUp is a microbial soil and foliar additive designed to boost production yields, enhance crop quality, and support soil remediation—all while reducing the need for chemical fertilizers.

BloomUp strengthens plants against environmental stressors such as drought, frost, and wind. Additionally, BloomUp includes a natural additive that supports deer resistance, making it especially effective for blooming and production-focused plants and crops.

BENEFITS OF BLOOMUP

LESS PLANT STRESS

BloomUp enhances plant resilience to stress caused by drought, transplant shock, and extreme temperatures.

BETTER PLANT HEALTH

The bacterial species in our products are carefully selected to strengthen plant cell structure, enhance salt tolerance, and boost sugar levels — key indicators of overall plant health and vitality.

REDUCED FERTILIZER INPUT

Soil microbes perform essential functions like nitrogen fixation and phosphate solubilization, enhancing nutrient availability and decreasing reliance on synthetic fertilizers.

INCREASED NUTRIENT EFFICIENCY

Microbes play a critical role in soil fertility by breaking down organic and inorganic matter and transforming nutrients into forms that plants can readily absorb.
