

GrazeUp™

ORGANIC SOIL ENHANCER

GrazeUp is a microbial soil and foliar additive designed to increase production yield, quality, and provide soil remediation while reducing chemical and fertilizer use. Grazeup is geared primarily toward livestock forages and forage grasses.

GrazeUp supports clean water initiatives by reducing water runoff and the nutrient load carried in the excess water. GrazeUp also decreases plant susceptibility to environmental stressors such as drought, frost, and wind.

BENEFITS OF GRAZEUP

**ALL ORGANIC
AND NATURAL**

INCREASED FORAGE YIELD

GrazeUp promotes denser, healthier forage stands for grazing and also enhances the nutritional value of the forage.

REDUCED FERTILIZER USE

Soil microbes perform essential functions like nitrogen fixation and phosphate solubilization, enhancing nutrient availability and decreasing reliance on synthetic fertilizers.

CLEAN WATER SUPPORT

GrazeUp reduces nutrient runoff into nearby water sources and contributes to sustainable watershed and environmental stewardship.

STRESS RESISTANCE

GrazeUp enhances forage resilience to stress caused by drought, frost, and extreme temperatures.
