

**BIO SOIL**  
ENHANCERS

PRESENTS

**RackUp™**  
HUNTING PLOT ENHANCER

RackUp is a microbial soil and foliar additive to increase production yield and quality as well as assist with soil remediation while reducing chemical fertilizer use. It also supports clean water initiatives by reducing water runoff and the nutrient load carried in excess water.

RackUp decreases plant susceptibility to environmental stressors such as drought and frost.

This product is geared toward hunting food plots, with additive to boost deer attractant.

## Benefits of RackUp

### Deer Attractant

We have a flavored deer attractant additive that helps draw the deer to your plot.

### Better Nutrition

High Brix levels helps attract the deer and makes them want to eat more which helps their overall health.

### Soil Remediation

Maintaining good soil and plant health. Keeps plants drought and frost resistant.

### Higher Brix

Higher sugar contents attracts deer to the plot and makes them want to eat more, which also helps with nutritional values.
